

ERP Migration

DETAILED OVERVIEW

An ERP migration is more than a technical upgrade; it is an opportunity to reset your business's operational foundation.

Ahatis acts as your implementation partner and strategic safeguard, managing the end-to-end lifecycle of the migration, from legacy extraction to post-go-live optimization, so you can realize the benefits of a modern tech stack without the typical pitfalls.

OUR MIGRATION METHODOLOGY COVERS FOUR ESSENTIAL PHASES

<p>01</p> <p>Readiness & Selection</p> <p>We evaluate your current environment to determine the best-fit ERP solution (SaaS or Hybrid) and develop a phased migration roadmap that prioritizes business continuity.</p>	<p>02</p> <p>Intelligent Data Migration</p> <p>Leveraging our deep data expertise, we handle the complex extraction, cleansing, and mapping of legacy data, ensuring high-fidelity transfer and zero loss of critical business history.</p>	<p>03</p> <p>Process Harmonization</p> <p>We use the migration as a catalyst to retire inefficient "shadow IT" and customized legacy workflows, replacing them with standardized, best-practice processes within the new system.</p>	<p>04</p> <p>Change Management & Adoption</p> <p>We provide the training and support frameworks necessary to ensure your workforce is ready on Day 1, maximizing user adoption and shortening the time-to-value.</p>

THE AHATIS ADVANTAGE

We specialize in "Clean Core" migrations

By focusing on data integrity and process standardization, we ensure your new ERP isn't just a newer version of your old problems, but a launchpad for AI and advanced automation.
