

# Supplier Data Exchange

## DETAILED OVERVIEW

A supply chain is only as resilient as its weakest link. Most disruptions occur because of an "information lag" between a company and its suppliers. Under our **Supply Chain** pillar, **Ahatis** implements a robust data exchange framework that moves beyond manual emails and spreadsheets to a secure, automated portal of truth. We turn "Suppliers" into "Integrated Partners."

## OUR SUPPLIER DATA EXCHANGE FRAMEWORK

**01**

### Collaborative Demand Forecasting

We share anonymized, real-time demand signals with your suppliers, allowing them to align their production cycles with your actual sell-thru data, significantly reducing lead times.

**02**

### Automated Lead-Time & Risk Monitoring

We integrate supplier production data to track potential delays in real-time, triggering automated alerts and contingency workflows before a shortage impacts your production line.

**03**

### Supplier Performance Score carding

We use automated data collection to track OTIF (On-Time, In-Full) metrics, quality benchmarks, and compliance, providing a factual basis for quarterly business reviews and contract negotiations.

**04**

### Secure API & EDI Integration

We manage the technical complexity of connecting disparate ERP systems, ensuring data flows securely and seamlessly between your internal environment and your global vendor base.

THE AHATIS ADVANTAGE

## We replace "just-in-case" inventory with "just-in-time" information.

By fostering a transparent Data Exchange, we help you build a responsive supply chain that can pivot instantly to market changes, ensuring your vendors are always an asset, never a bottleneck.
